HAMACHI INSTALLATION

Users will need to install the Hamachi / LogMeIn client on to their computer to use this type of VPN network.

This is a free download: <u>https://vpn.net/</u> or alternatively download Hamachi software from the GAFL group page.

The free Hamachi client allows users to connect with up to 5 others users.

HAMACHI NETWORK CREATION / JOINING

When complete the following Hamachi dialog box will appear.

1. Press CREATE A NEW NETWORK button

Create a new client-owned (?) network Network ID: Used to locate and join network. Password: Used to restrict access to network. Confirm password: Create Create Cancel or Log in to create a new managed (?) network	eate Network	Notwork Magaga Hala
Network ID: Used to locate and join network. Password: Used to restrict access to network. Confirm password: Create Cancel or Log in to create a new managed (?) network	Create a new client	-owned <u>(?)</u> network
Password: Used to restrict access to network. Confirm password: Create Cancel or Log in to create a new managed (?) network	Network ID:	Used to locate and join network.
Confirm password: Create Cancel or Log in to create a new managed (?) network	Password:	Used to restrict access to network.
Create Cancel or Log in to create a new managed (?) network	Confirm password:	
Log in to create a new managed (?) network	or	Create Cancel
	Log in to create a n	ew managed (?) network

- 1. Fill in the name of your Network ID, can be anything you like (Mickey Mouse, GAFL2024).
- 2. Fill in a Password, no restrictions and can be anything. (football, GAFL2024)
- 3. Re-type Password.
- 4. Press CREATE button.

The Network ID and Password can be the same.

If the Network ID has been previously used an error message will occur asking you to create an alternative.

or	Create	k
Log in to create a ne	ew managed (?) network	
Managed networks can advanced functionality	be administered centrally on the web, and support such as gateway networks or hub & spoke topology.	

The Network ID and Password will be used by anyone who wishes to connect to your Network.

Any number of Networks can be created, only restriction being a maximum of 5 users are allowed per Network.

€ Lo	gMeIn Ha	məchi		-	×
System	Network	⊿nage	Help		
U	25.16.100.22 _APTOP-H3F	2620: RHRK4H	9b::191	10:64	dc
	IDONFOOTBA	LL		1/5	

The created Network will be shown with a green circle to show that it is active.

The IP address to the right of the ON / OFF button is unique to you and this needs to be forwarded onto your opponent so they can connect to DKSports Action PC games through your VPN network.

If using Hamachi the only IP address that can be used when connecting to DKSports Action PC games begins with 25. (A typical Hamachi IP address 25.16.100.220)

Do not use any other IP address as they maybe for direct connecting and will not work when trying to run DKSports Action PC games.

There are other VPN network providers on the market, such as Radmin, that will begin with their own unique number similar to Hamachi.

Hosting On Your Network

- 1. To HOST you will need to have created a Network, see instructions above,
- 2. Send your opponent your NETWORK ID, PASSWORD (for connection to your network) and IP 25.16.100.220 (for connecting to DKSports Action games)
- 3. Do nothing else.

When your opponent has connected to your Network the following Hamachi dialog box will appear.

Joining Another Network

- 1. From the System / Network / Manage / Help menu bar, select Network'
- 2. Scroll down to JOIN AN EXISTING NETWORK
- 3. Press the left hand mouse button to select.

	- Inolling 32000		
Join Network			×
Network ID:			
Password:			
	Leave blank if unknown.		
		Join	cel
		`	

- 1. Fill in the Network ID, given to you by the user whose Network you are trying to connect to.
- 2. Fill in the Password, given to you by the user whose Network you are trying to connect to.
- 3. Press JOIN button.

When you have joined / connected to this Network the following Hamachi dialog box will appear.

Once om you will see any networks that you have created with a green light and possibly anyone who is connected to it, inactive will be greyed out, active dark with a green light.

To EVICT someone as you are limited to the number of people you can have connected on the free version, highlight that connection and press the right hand mouse button and select Evict from the list and then press yes when the confirmation dialog box appears, gone.

To JOIN select NETWORK from the menu at the top and then JOIN NETWORK. Your opponent should have sent you their details (similar to what you supplied above). Fill in the NETWORK NAME and PASSWORD press JOIN. When you go back to the main Hamachi screen their network will appear with green light along with possibly a list of connections they still have.

For both HOST or JOIN connections highlight the one with the darker text and green light and press the right hand mouse button. Select CHAT from the drop list and a dialog box will appear. Type in text etc. and if your opponent does not have the CHAT window open a Speech Bubble will flash at the far left of the connection.

The connection name will be different from one Hamachi to another to change it go to SYSTEM and select PREFERENCES and then NAME and CHANGE, hence mine is nomads2000 instead of something like 5XDU78DHH.
